

Default CN22: Shipping The Same Item

You can set standard customs information if you **only ship one type of product**. For example, if you only ship one type of waterproof jacket, the value, description, commodity code and country of origin will always be the same.

This means you will not have to upload customs information with each file – **it will become non-mandatory**.

However, please take care when using this feature. If the shipped product **deviates from that declared on the CN22, customs agencies may return the product**.
